Pipeline Extension and Distance Adjustment Solution

APP Plain End Pipes are manufactured to facilitate installation—especially in the repair of hard-to-source pipelines such as Cast Iron, AC (Asbestos Cement), and GRP—by being used between pipe connection adaptors. They are also designed to fill gaps between equipment such as valves, pumps, and meters, connect pipeline sections, or cover specific distances with high precision.

Custom lengths (L) are produced according to project requirements.

KEY ADVANTAGES

- ▶ Ideal solution for repair works involving hard-to-source pipes (Cast Iron, AC, GRP)
- ▶ Available in various lengths and diameters
- ▶ Optional reduction versions available for all required diameters
- ▶ Provides precise distance adjustment and alignment in pipelines
- ▶ Reliable performance under high pressure
- ▶ Durable structure with long service life
- ▶ Facilitates maintenance and dismantling operations

PARTS AND MATERIAL SPECIFICATIONS

No	Component	Material and Technical Details
1	Pipe	ST 37 STEEL. High-strength, load-bearing structure.
2	Reduction (Optional)	ST 37 STEEL. Superior quality in welding craftsmanship.
3	Coating	Epoxy/Thermoplastic Coating. Durable protection, extended longevity.

AREAS OF APPLICATION

- Potable water and infrastructure pipelines
- Industrial pipeline systems
- Used as a complementary element between pipe connection adaptors
- Valve and pump connections
- Repair, maintenance, and rehabilitation works
- Pipeline installation and retrofit applications
